
Anesthesia
Laryngoscope
Rubberband/Gauze
Endotrachel tube
Stethoscope
Iso level
Eye Lube
Surgery

Like you, our greatest concern is the well-being of your pet. Before putting your pet under anesthesia, we will perform a full physical examination. However, many conditions, including disorders of the liver, kidney or blood are not detected unless blood testing is performed. Such tests are especially important before any kind of surgery.

For these reasons, we highly recommend blood screening before such procedures. We are presenting these services as a recommended option for pets under six years of age. However, blood screening is required for pets six years and older.

Our laboratory is fully equipped and staffed to perform these tests. Results will be immediately available to examine before anesthesia and/or surgery. Please indicate your choice below:

- | | |
|--|--|
| <p>Under 6 Years</p> <p>Yes, I want my pet to have a pre-anesthetic blood screen.
(Please check testing choice.)</p> <p>(<input type="checkbox"/>) Wellness Profile
(<input type="checkbox"/>) Wellness Profile + CBC</p> | <p>6-12 Years</p> <p>Pets this age will be required to have a pre-anesthetic labwork that will include a wellness profile + CBC and/or urine with the T-4 tests. Please ask to speak with the veterinarian or refer to your estimate.</p> |
